Forensic clarity for compliance

Complete Evidence

Full packet capture provides court-admissible proof

Rapid Response

Automated reporting meets tight NIS2/DORA deadlines

Executive Protection

Comprehensive documentation shields leadership

➢ **Turn compliance burden into operational advantage.**

Compliance demands more than an alert, it requires proof

24 Hours

Submit initial incident report

72 Hours

Provide detailed update

1 Month

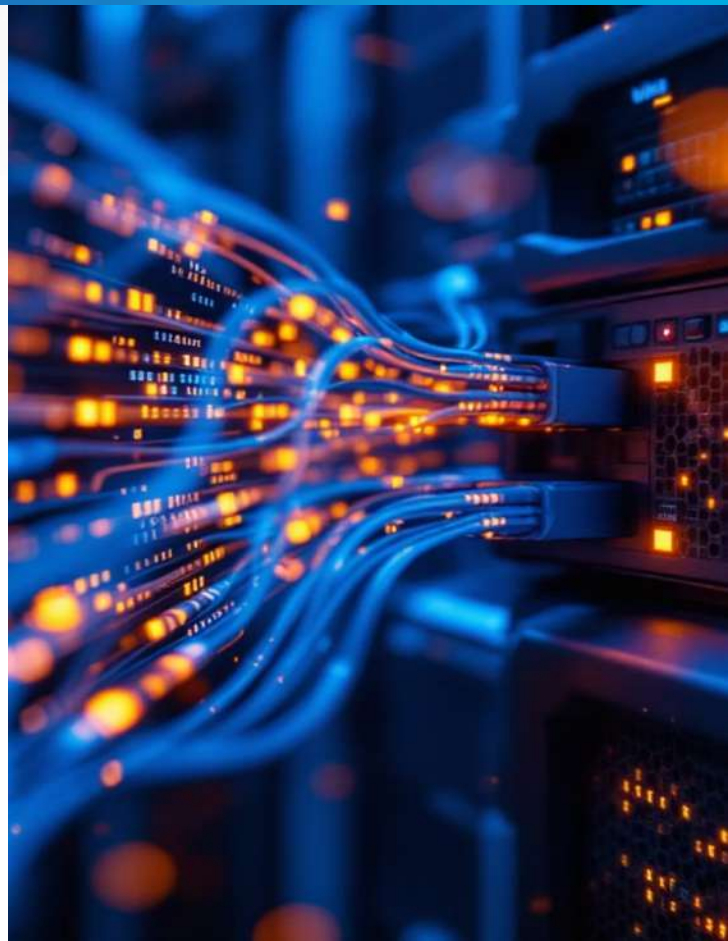
Deliver final post-mortem

Non-compliance risks multi-million-euro fines and executive suspensions.

Basic logs aren't enough - forensic network evidence required.

How VIAVI Observer helps

- Provides packet-level visibility and enriched flow records to precisely track events, identify affected parties, and determine exposure scope
- Enables thorough post-breach forensic investigations through extended data retention that surpasses typical limitations
- Maps ICT interdependencies and monitors performance degradation to facilitate alignment with DORA Articles 8 and 10



VIAVI Solutions

Zscaler Integration for Higher Visibility and Zero Trust Enforcement

Enhanced Visibility

Combined insights from VIAVI Observer and Zscaler provide end-to-end visibility across all network traffic.

Zero Trust Architecture

Enforce identity-based access controls while maintaining detailed forensic audit trails.

Seamless Integration

Automated data exchange eliminates security blind spots between cloud and on-premise environments.

This strategic partnership delivers the comprehensive security posture needed for NIS 2/DORA compliance while simplifying operational complexity.

ServiceNow Integration: Streamlined Incident Response

VIAVI Observer seamlessly connects with ServiceNow to transform incident management and maintain accurate CMDBs.

Automated Incident Creation

Observer-detected anomalies instantly generate ServiceNow tickets with forensic evidence attached.

Unified Workflow

Track incidents from detection through resolution in a single platform.

CMDB Enrichment

Keep configuration items current with automatic network topology and dependency updates.

Compliance Documentation

Generate NIS 2/DORA-ready reports directly from resolved incidents.

Splunk SIEM Integration: Enhanced Incident Intelligence

VIAVI Observer integrates with Splunk SIEM to provide deep forensic insights for complete incident response workflows.

Threat Detection

Splunk identifies potential security events while Observer captures full packet data simultaneously.

Forensic Investigation

One-click access to packet-level evidence directly from Splunk alerts for rapid root cause analysis.

Automated Data Exchange

Enriched network intelligence flows seamlessly between platforms with bi-directional API integration.

NIS2/DORA Documentation

Generate comprehensive incident reports with forensic evidence for regulatory compliance requirements.

This integration transforms Splunk alerts into actionable intelligence with court-admissible forensic evidence.
