

For over thirty years, Enterprise SpA has been developing state-of-the-art and technologically advanced IT solutions for the banking and financial sector, operating in both the domestic and international markets.

The product offering, with on-premises or cloud delivery, includes platforms for core banking and international banking operations, digital and multi-channel payment systems, access portals to services for retail and corporate customers, and other vertical applications (for example, in the trade finance sector).

The company processes, in terms of quality and security, are ISO 9001 and ISO/IEC 27001:2022 certified for the entire scope of their activities: *development and maintenance of IT solutions; consulting, assistance, and service management for application and system components.*

Enterprise's goal is to provide increasingly advanced software tools that constantly elevate the technological and functional level of its customers' processes, boosting their business and compliance, and giving them the certainty of being more productive with fewer resources.

The company's “credo”, which guides the design and evolution of its products, is to free end users from any manual tasks that can be more effectively and efficiently achieved with software automation, allowing customers to focus all their work energy on expanding their business.

Since May 2025, Enterprise has been part of Constellation Software Inc., a Canadian technology company listed on the Toronto Stock Exchange, which brings together software companies operating in the public and private sectors with over €10 billion in revenue, for more than 100 different vertical markets worldwide and over 125,000 customers.
